Perfect — now we're going to package your entire project into **2 powerful prompts**:

1. **Frontend Prompt (UI + behavior)**
2. **n8n Backend Prompt (workflows + integrations)**

You can paste these into ChatGPT / AI builder and get most of your system generated.

🚀 1. FRONTEND PROMPT (FlowBridge UI)

```
You are an expert frontend developer and product designer.

Build a clean, modern, single-page web application called "Fl
owBridge".

GOAL:
Create a SaaS-style interface that allows users to upload mes
sy business data, analyze it using AI, and trigger automated
workflows like invoice generation and email sending.

---

UI REQUIREMENTS:

1. Header:
- Title: FlowBridge
- Subtitle: "Turn messy business data into automated actions
instantly"

2. File Upload Section:
- Drag & drop or file input (CSV/Excel)
- Button: "Analyze Data"
```

```
3. AI Processing State:
- Show loading animation or text: “Analyzing data with AI…”
- Add slight delay for realism

4. Results Section:
Display:
- Detected Entity (e.g., Customers)
- Field Mapping (table format)
- Confidence Scores (percentages)
- Conflict Detection:
  - Show duplicates found
  - Show “Recommended record selected”

5. Action Button:
- “Sync & Generate Invoice”

6. Final Status Section:
After sync:
- Show:
  - “Invoice created successfully”
  - “Email sent to client”
  - “Invoice saved locally”

---

FUNCTIONAL REQUIREMENTS:

1. When user uploads file:
- Send file via POST request to:
  /webhook/analyze

2. Display JSON response nicely formatted

3. When user clicks “Sync & Generate Invoice”:
- Send request to:
  /webhook/sync
```

```
4. Show success message after response

---

TECH STACK:
- Pure HTML, CSS, JavaScript (no frameworks)
- Use fetch API for HTTP calls

---

UX IMPROVEMENTS:
- Add loading spinner
- Add clean card layout
- Use colors: blue, white, light gray
- Add subtle animations

---

IMPORTANT:
- Make it look like a real SaaS dashboard
- Prioritize clarity and visual impact over complexity
- Code should be clean and easy to run locally

---

OUTPUT:
Provide complete working HTML + CSS + JS in a single file.
```

⚙️ 2. n8n BACKEND PROMPT (FULL WORKFLOW)

```
You are an expert automation engineer using n8n.

Design a complete backend workflow system for a product calle
d FlowBridge.

GOAL:
Build two n8n workflows:
1. Data Analysis Workflow
2. Sync & Automation Workflow

---

WORKFLOW 1: /webhook/analyze

STEPS:

1. Webhook Node (POST)
- Accept file upload (CSV/Excel)

2. Parse File
- Convert to JSON

3. OpenAI Node:
Prompt:
Analyze business data and return:
- detected_entity
- field mappings
- confidence scores
- cleaned data
- duplicate/conflict detection

Return structured JSON.

4. Respond to Webhook:
- Send JSON back to frontend
```

```
---

WORKFLOW 2: /webhook/sync

STEPS:

1. Webhook Node

2. Use processed data (or static demo data)

3. Create Contact in Xero:
- Map:
  name, email

4. Create Invoice in Xero:
- Type: ACCREC
- Status: AUTHORISED
- Add line item:
  description, amount

5. Get Invoice as PDF

6. Send Email:
- Attach PDF
- Send to customer email

7. Save PDF Locally:
- Use Write Binary File node
- Path:
  ./invoices/invoice_{{$json.InvoiceNumber}}.pdf

8. Respond:
Return:
{
  "status": "success",
```

```
  "message": "Invoice created, emailed, and saved locally"
}

---

INTEGRATIONS REQUIRED:

- OpenAI API (for AI processing)
- Xero API (OAuth2)
- Email (SMTP or Gmail)
- Local file system (Write Binary File node)

---

IMPORTANT:
- Keep workflow simple and demo-friendly
- Ensure all steps are connected properly
- Use clear node names
- Add small delays for realism

---

OUTPUT:
- Step-by-step node configuration
- Field mappings
- Example JSON input/output
```

🔗 HOW THEY CONNECT

Frontend Action	n8n Endpoint
Upload file	`/webhook/analyze`
Click sync	`/webhook/sync`

🧠 Final System Flow

```
Frontend UI
   ↓
Analyze → n8n → AI → Mapping → UI

Sync → n8n → Xero + Email + Save PDF
```

🏆 What You Get

With these 2 prompts:

✅ Full frontend UI

✅ Working backend automation

✅ AI integration

✅ Invoice + email + local storage

✅ Real product demo

🔥 Pro Tip (Important)

Before demo:

- Replace real data with safe demo data
- Keep internet stable
- Pre-test entire flow

🚀 One-line summary

> "Frontend shows the magic. n8n executes the magic."

If you want next:

- 💻 I can generate the **actual frontend code for you**
- 🔧 Give **ready n8n workflow JSON (import file)**
- 🎬 Create your **exact demo script**
- 🧠 Improve SmartConflict AI (next-level)

Just tell me 👍
